Hidrex therapy against sweating

HIDREX-Therapie

The Hidrex-Therapy-Home-Device GS CLASSIC and PS PLUS can easily be used, is highly reliable and very effective. In co-operation with large universities in Germany, this concept was developed for high demands.

You can choose between two currents:

Direct current DC and pulse current PC. In addition we offer different kind of therapies and optional accessories. They are perfectly coordinated according to the device you use.

Details can be found on our [Homepage](http://www.hidrex.com).

The HIDREX Treatment Procedure

The treatment procedure has two phases:

In the **first phase** (initial therapy) the therapy takes place under the supervision of a medical doctor, and the realization of the treatment will be taught. After approximately ten treatments, the sweat secretion will have reached a normal stage. After this initial success, under the supervision of a physician, is reached, this can be submitted to the health insurance as proof.

The **second phase**: Because of the reversible character of the Hidrex Therapy a long term treatment is indicated, which can be done at home using this device. To continue the success of the treatment, the therapy should be followed through one to two times a week, depending on the severity of the clinical syndromes.
